BACKEND WEB DEVELOPER

I created the viral app CheckValorant (Riot Games hated it so much that they sent a legal notice), which used to provide in-game insights about Valorant. I have also built in-house tools for social media automation, and faster news tracking at Gamzo. I am passionate about backend development, and cyber security, and I constantly seek to learn novel ways of solving challenges in the IT sector.

I know technologies like Python, Javascript, and NodeJS like the back of my hand.

KEY COMPETENCIES

Backend Development	Leadership	Postman
AWS	Communication	Cloudflare Suite of Services
Node JS	Ability to work independently	and much more ...
